

Dear Colleagues:

There is 1 opening for a postdoc position in my group starting from May 2017, although the position could start sooner. The research is broadly speaking on non-equilibrium quantum systems with applications to topological insulators, cold atoms, pump-probe spectroscopies etc.

I would greatly appreciate it if this information is circulated among eligible candidates. Interested candidates should email me their CV and research statement. The candidates should also arrange for 3 letters of recommendation to be emailed to me at the following address: aditi.mitra@nyu.edu.

Many thanks,
Aditi
