

Dear colleagues,

We at the University of Chicago in the James Franck Institute are interested in hiring one or two post docs for the next academic year.

Possible projects involve work on highly correlated materials and ultracold atomic gases. Interactions with experimental faculty are also encouraged. Our condensed matter theory faculty include

Peter Littlewood, K. Levin, Michael Levin, Paul Wiegmann as well as two new additions arriving in January.

Please have your interested students and post docs send their letters of Application, CV and 2-3 letters of recommendation to

Prof. K. Levin
