POSTDOCTORAL POSITIONS IN CONDENSED MATTER THEORY

Zhejiang University

The condensed matter theory group in Zhejiang University anticipates several postdoctoral openings with flexible starting dates in 2015. These postdoctoral fellows will normally be appointed for a two-year period with the possibility of extension for the third year. The salary and benefits will be comparable to those in the US or in Europe. The present condensed matter theory group includes Qijin CHEN, Stefan KIRCHNER, You-Quan LI, Li-Hua LU, Xin WAN, Fu-Chun ZHANG and Yi ZHOU. The areas of our current research interests range from strongly correlated systems to topological phases in condensed matter, including unconventional superconductivity, quantum magnetism, quantum Hall effect and topological quantum computing, multi-ferro materials, heavy fermion, and ultracold atoms. Candidates should submit via email their applications, CV, and statement of research interests, at least two names of references to the secretary Ms. Zhen WU at zhoulab@zju.edu.cn, or any of the group members listed above. More information about these positions and our group can be found in <http://physics.zju.edu.cn/pw/cmt>
