Postdoctoral Position in Condensed Matter Theory, Grenoble-France

In view of the recent creation of a Chair of Excellence by the Nanosciences Foundation in Grenoble, France, outstanding applicants are sought for a postdoctoral opening in condensed matter theory, to start in the autumn or winter of 2008. The postdoctoral work will be guided by the Chair, Prof. Leonid Glazman (Yale University, USA), Prof. Frank Hekking (CNRS - J. Fourier University, Grenoble), and Dr. Manuel Houzet (CEA-Grenoble). Collaborations with experimental and theory groups of CNRS and CEA are expected and will be encouraged. Preference will be given to candidates with expertise in quantum aspects of condensed matter and research interests in the general area of electron correlations, disordered systems, cold atomic gases, and physical implementations of quantum computation. Candidates should forward their CV with publication list and outline of research interests, and arrange for three letters of recommendation. Candidates may also include selected preprints or reprints of their papers. Electronic submission (in pdf format) is strongly preferred and should be sent to frank.hekking@grenoble.cnrs.fr. Search will be continued until position is filled.
